ABOUT ME

I am a hardworking and friendly person who loves solving problems and finding new ideas. I enjoy working with others and believe teamwork is important for success. I always want to learn more and try to improve my skills every day. I like to explore new technologies and adapt to changes in my work. In my free time, I work on my hobby projects as a developer, exploring ideas that truly excite me.

EXPERIENCE

Turkcell Technology

November 2021 - Current

Master Expert Business Analyst & Execution Lead

I'm currently engaged in developing insurance and finance applications for Turkcell, which are utilized by both customers and dealers. As a Product Owner, I ensure that the product vision is clearly defined and the development aligns with customer needs and business objectives. Our project tech stack incorporates React with Redux for frontend development and Java Spring Boot for backend services, with Scrum methodologies guiding our workflow. Additionally, I perform regression test automation using Selenium to ensure the quality and functionality of our applications, and also contribute by writing other test automation scripts as needed. Beyond my work at Turkcell, I am actively involved as a volunteer developer, leveraging my skills in Python with Flask and Next.js to contribute to meaningful projects.

Anadolu Sigorta Insurance Company

July 2021 - November 2021

Senior Business Analyst

While at Anadolu Sigorta, I served as a Business Analyst, responsible for gathering and defining business requirements. I conducted thorough analysis to identify problems, opportunities, and potential solutions, facilitating effective communication among stakeholders. Project techstack was React in frontend and .NET in backend.

Allianz Turkey

September 2017 - July 2021

Business Analyst & Product Owner

I have worked as a Business Analyst and also taken on the role of a Product Owner during the transformation of Allianz Turkey software systems into the Allianz Global module (ABS). In this role, I played a key part in improving the New Business & Underwriting processes for various financial institutions and agencies. Additionally, I conducted analysis on the peripheral team of the project to ensure comprehensive solutions.
